**CAT FOOD - NUTRITIONAL COMPOSITION**  
 Data compiled by Lisa A. Pierson, DVM  
 Typical nutrient analysis data provided by the respective companies  
 Wet only - **no dry food** is listed  
 2017

**Print**

The print version above has many blank areas because I am waiting for data to come in. I will be adding to it over time.

| Caloric Distribution |       |        |                             |   |
|----------------------|-------|--------|-----------------------------|---|
| PROTEIN %            | FAT % | CARB % | mg PHOSPHORUS/<br>100 kcals | CALORIES per<br>5.5 oz unless<br>otherwise<br>noted |

**Request for Donations**

Welcome to the updated Food Chart! Over the past 6 years, this chart has helped countless cat caregivers navigate the wide array of cat food choices but now I am asking folks to **'pay it forward' to help homeless cats & kittens** that are less fortunate than the ones with a roof over their head and someone to love and care for them. As a veterinarian heavily focused on rescue work, I have witnessed significant suffering of these animals and I want to do all that I can to help them whenever possible.

The information on this chart and on my website at [catinfo.org](http://catinfo.org) continues to benefit many felines but I would love to see the lives of **homeless cats & kittens** improve also.

If you find this chart to be of help to you and your four-legged family members, please consider a donation to **FixNation** which is a wonderful non-profit organization that focuses on spaying/neutering of homeless and owned cats. Considering that 1 female cat and her offspring have the potential to produce 420,000 kittens in 7 years, one can see the **tremendous amount of suffering that can be prevented by spaying/neutering**.

This chart took a tremendous amount of time to compile and I can't think of a better way to be compensated for my time than to have my efforts result in getting more help for homeless cats and kittens. They will appreciate *any* donation, **no matter how small!** FixNation's website is [FixNation.org](http://FixNation.org) if you would like to learn more about this great organization.

**No Dry Food on this Chart**

There is **no dry kibble** included here. See the [Urinary Tract Diseases](#) and [Diabetes](#) webpages at [catinfo.org](http://catinfo.org) for specific reasons why dry food is not recommended for cats. The main reasons are:

- 1) Water-depleted diets do not promote urinary tract health and they **significantly increase your cat's risk for very painful and potentially fatal urethral obstructions**, as well as other urinary tract problems. Please see [Opie's pictures](#) for a good look at the tremendous amount of suffering that dry food often causes. Cats have a low thirst drive and consume ~50% more water when on a wet diet versus a dry diet. This is considering all water sources: food + water bowl
- 2) Dry kibble is typically **higher in carbohydrates** than wet food. Carbohydrates negatively impact the blood sugar level of many cats and diets that are high in carbs are not species-appropriate. The insulin needs of diabetic cats nearly always decrease significantly when their dietary carbohydrate load is decreased. A serious hypoglycemic state can occur in diabetic patients receiving insulin when this is not recognized. Please note that even some canned foods (e.g., Hill's Rx diets and their retail "Science" diets) are species-inappropriately high in carbohydrates.
- 3) Cats are **obligate carnivores** and are designed to get their protein from **animal** sources, not plants (grains and vegetables - including potatoes).

If your cat is addicted to dry food, see [Tips for Transitioning Dry Food Addicts to Canned Food](#).

|--|--|---|-------------------------------------|---|---|--|
| <p align="center"><u>Print</u></p>   | <p align="center"><b>Caloric Distribution</b></p>  |   |                                     |   |   |  |
| <p>The print version above has many blank areas because I am waiting for data to come in. I will be adding to it over time.</p>  | <p align="center"><b>PROTEIN %</b></p>   | <p align="center"><b>FAT %</b></p>  | <p align="center"><b>CARB %</b></p> | <p align="center"><b>mg<br/>PHOSPHORUS/<br/>100 kcals</b></p> | <p align="center"><b>CALORIES per<br/>5.5 oz unless<br/>otherwise<br/>noted</b></p> |  |
|  |  |   |                                     |   |   |  |
| <p><b>NOT RECOMMENDED</b></p>  | <p align="center"><b>Compiling the Chart</b></p>   |   |                                     |   |   |  |
| <p>The following is a list of companies that were not forthcoming with TNA data for their products. Given that there are <b>plenty of other choices on the market</b>, the consumer should not support companies that do not respect the consumer's right to <b>quickly</b> and <b>easily</b> obtain vital nutrition information. (More comments can be found at the bottom of the chart.)</p> | <p>The data used to calculate the values on this chart are from <b>Typical Nutrient Analysis (TNA)</b> data - <i>not</i> the <b>Guaranteed Analysis (GA)</b> data which is listed on the product's package (can/pouch/bag). GA values are reported as <b>minimums</b> and <b>maximums</b> and are, by definition, inaccurate since there is no ceiling or floor, respectively.</p>   |   |                                     |   |   |  |
|  | <p>Also note that <b>phosphorus</b> values are not listed on the package and this value is important for cats with kidney disease. (The lower the phosphorus level, the better.)</p>   |   |                                     |   |   |  |
| <p><b>Addiction</b></p>  |  |   |                                     |   |   |  |
| <p><b>Petsmart private label:</b><br/> Authority<br/> Good Natured<br/> Grreat Choice<br/> Simply Nourish</p>  | <p>The listing of <b>fat</b> as a "minimum" instead of a "maximum" is especially problematic because fat is cheap and protein is expensive. Allowing pet food companies to list fat as a minimum instead of a maximum <b>gives pet food companies free rein to produce high fat (and, therefore, low protein) diets</b> which serves to enhance their bottom line but, on a good note, also provides a more affordable price point for the consumer.</p> |   |                                     |   |   |  |
| <p><b>Nutrisca (Dogswell brand)</b></p>  | <p>When <b>animal by-products</b> are used as a source of protein, the consumer often gets more bang for their buck and the cat is fed a more species-appropriate composition - i.e., higher protein/lower fat diets at a lower price. Please see the comments at <a href="http://catinfo.org">catinfo.org</a> regarding <a href="#">by-products</a>. The 'anti-by-product' movement has been taken to an extreme.</p>                                   |   |                                     |   |   |  |
| <p><b>Party Animal</b></p>   |  |   |                                     |   |   |  |
| <p><b>Feline Natural (K9 Natural)</b></p>  | <p><b>Data accuracy:</b> Even though TNA data are more precise than GA data, the values on this chart should be taken as <b>very loose approximations</b>. All foods vary in their nutrient composition and, therefore, commercial food formulations will vary from batch-to-batch.</p>  |   |                                     |   |   |  |
| <p><b>Blackwood</b></p>  |  |   |                                     |   |   |  |
|  | <p>The bottom line is - this chart is the best that we can do but it is important to understand that <b>these values are not 'etched in stone'</b> and will also <b>change if a company alters its formula</b>. If you are concerned with having the most current data on the food that you feed to your cat, you will need to call the company periodically to see if the formulation has changed.</p>  |   |                                     |   |   |  |

| <p><b>2 Sortable Charts:</b><br/> <b>1) Google Drive</b><br/> (2 tabs - Data and Notes)<br/> <b>2) Extensive filters</b></p>   |  | <p align="center"><b>CAT FOOD - NUTRITIONAL COMPOSITION</b><br/> Data compiled by Lisa A. |--|--|---|------------------------------------|-------------------------------------|---|---|
| <p align="center"><u>Print</u></p>   |  | <p align="center"><b>Caloric Distribution</b></p>   |                                    |                                     |   |   |
| <p>The print version above has many blank areas because I am waiting for data to come in. I will be adding to it over time.</p>  |  | <p align="center"><b>PROTEIN %</b></p>  | <p align="center"><b>FAT %</b></p> | <p align="center"><b>CARB %</b></p> | <p align="center"><b>mg<br/>PHOSPHORUS/<br/>100 kcals</b></p> | <p align="center"><b>CALORIES per<br/>5.5 oz unless<br/>otherwise<br/>noted</b></p> |
| <p>If you get frustrated with commercial cat food options and you desire more control over ingredient quality, source, composition, and phosphorus content of your cat's food, see <a href="#">Making Cat Food</a>. (Compostion = caloric distribution of protein/fat/carbohydrate.)</p>   |  |   |                                    |                                     |   |   |
| <p align="center"><b>Using the Chart</b></p>   |  |   |                                    |                                     |   |   |
| <p>Cats are obligate carnivores and are metabolically designed to consume diets with the following general composition:</p>  |  |   |                                    |                                     |   |   |
| <p>1) animal (not plant)-based <b>protein</b> (&gt;50% calories)</p>   |  |   |                                    |                                     |   |   |
| <p>2) moderate <b>fat</b> (~20-40% calories)</p>   |  |   |                                    |                                     |   |   |
| <p>3) very low <b>carbohydrate</b> (1-2% calories)</p>   |  |   |                                    |                                     |   |   |
| <p>4) <b>water</b>-rich (~70%)</p>   |  |   |                                    |                                     |   |   |
| <p>Keep this in mind when choosing food for cats but also understand that pet food ingredients are profit margin-driven. Protein is expensive. Fat and carbohydrate sources are cheap. This fact often results in the production of <b>high fat/high carb/low protein</b> diets as you will notice below. High-fat meat trimmings from the human market, not lean muscle meat, are what make their way into the pet food chain, and grains are less expensive than meat.</p>   |  |   |                                    |                                     |   |   |
| <p>"95% Chicken" does not mean 95% chicken <u>meat</u>. A "95% Chicken" diet can be extremely high in fat and low in protein because "Chicken" can be mostly fat.</p>  |  |   |                                    |                                     |   |   |
| <p>On a good note, in general, <b>most cats handle high fat diets better than they do high carbohydrate diets</b>. They are designed to eat protein and fat, not carbohydrates. Therefore, cats often do quite well on the relatively low protein/relatively high fat commercial diets. ("Relative" to what they would consume in the wild.)</p>   |  |   |                                    |                                     |   |   |
| <p><b>Grain-Free:</b> Please be aware that this marketing phrase is often used to influence pet owners to think that a diet carrying this distinction is automatically a healthy diet for their cat. Unfortunately, pet food companies often just replace grains with carbohydrate-laden peas and potatoes resulting in a diet that is <b>not</b> low-carbohydrate. Please replace the phrase "grain-free" with "<b>low-carb</b>" in your vocabulary when shopping for cat food. Some "grain-free" products <i>are</i> low in carbs but many are not so shop wisely.</p> |  |   |                                    |                                     |   |   |
| <p><b>Carbohydrates:</b> Choosing diets with 10% or less carb calories is a good goal but, unless the cat is diabetic, sticking with less than 15% is also reasonable.</p>   |  |   |                                    |                                     |   |   |

The print version above has many blank areas because I am waiting for data to come in. I will be adding to it over time.

**CAT FOOD - NUTRITIONAL COMPOSITION**

Data compiled by Lisa A. Pierson, DVM  
 Typical nutrient analysis data provided by the respective companies  
 Wet only - [no dry food](#) is listed  
 2017

**Caloric Distribution**

**PROTEIN %**

**FAT %**

**CARB %**

**mg  
PHOSPHORUS/  
100 kcals**

**CALORIES per  
5.5 oz unless  
otherwise  
noted**

**“Gravy”** foods are often high in carbohydrates due to the starch thickeners (e.g., rice flour) that are sometimes used to make the gravy. Some ‘gravy’ is made with gums (e.g., guar or xanthan) and those substances are soluble fibers (which *may* actually promote intestinal health) and do not contribute to the carbohydrate fraction in the same way as starches do. In short, **I would rather see guar or xanthan gum thickeners than starch (‘flour’) thickeners in gravy foods.**

**Liver:** I like to see “liver” on the label; it is a very good source of vitamin A and D, as well as copper and zinc. I would much rather see vitamins coming from **whole foods** rather than out of a laboratory. When vitamins are listed on the label separately, those are not coming from whole foods but are manufactured in a laboratory. If you feed a product without liver, please incorporate one with liver a few times each week.

Users of the old chart will notice that **dry matter** values (the *weight* of a nutrient) have been removed in order to streamline the chart and to make it look less overwhelming. The other reason is because, nutritionally-speaking, looking at the **composition** (the distribution of protein, fat, and carbohydrate) of food is best done on a **calorie (energy)** basis not a ‘weight’ basis.

Except as otherwise noted, the products listed are considered to be **complete diets**, rather than for supplemental or intermittent feeding only. That said, double check the label of any diet that you are feeding (if used as a sole diet) to make sure that it does not use the words “supplemental” or “for intermittent feeding” since these products are **not balanced for use as the only diet** that is fed.

**Applaws, Evangers, and Wysong** are examples of companies that manufacture diets that are for supplemental use only. In general, “supplemental” diets do not contain enough nutrients such as calcium, B vitamins, iodine, etc. These unbalanced diets should not make up more than 15-20% of the cat’s total caloric intake. Stated another way, if you feed your cat 21 meals per week, you could use these supplemental diets for ~4 meals per week as stand-alone meals or mixed with a nutritionally balanced product.

Inclusion of a product in this chart does not imply any endorsement. The chart is simply a compilation of data for many commercial options.

If a cell is blank, that means the information was not provided.

If you are interested in obtaining TNA data on a product not found on this chart, you will need to call the company. See [Commercial Canned Cat Food](#) for some help with the dialog to use. If you obtain some usable data, you can send it to me via my [Contact](#) form at [catinfo.org](http://catinfo.org) and I will add it to the list when I find the time.

| Please note that Dave's <i>Chicken in Sauce</i> - low protein & and low phosphorus product mimics Hill's k/d renal diet which is one that I would never feed to any cat in my care - including patients with kidney disease. It was a very sad day when protein became the enemy of the feline kidney. Please do not feed diets that are this low in protein. |   |       |        |                             |   |

| <b>FANCY FEAST Delights with Cheddar</b>  | The relatively low phos value of 265 for the Turkey was obtained from Purina's Veterinary Product Guide. It was based on TNA dry matter basis. The other 3 phos values came from what appear to be GA values (not accurate) obtained from a phone call to Purina. I suspect that the phos values for the chicken, tuna, and whitefish are actually lower than shown below. |       |        |                             |   |

| <b>WYSONG</b><br>IMPORTANT: Please note that the Wysong Epigen (formerly "Au Jus") diets are <b>not</b> complete and balanced for use as a sole diet unless the Wysong Call of the Wild supplement is added. The Epigen canned foods do not contain enough calcium and other nutrients to provide a nutritinally balanced diet. If you want to feed these diets as a stand-alone meal a few times/week, or mix 10-15% of this <b>unbalanced</b> diet with 85-90% of a <b>balanced</b> diet then that should be fine. |                             |              |               |                                 |   |

| <p>Companies varied widely in how readily they provided their Typical Nutrient Analysis (TNA) data. A few companies actually refused to provide it saying that it is "proprietary" which is utterly ridiculous. Any company that considers this type of very basic data to be "proprietary" is exhibiting a complete <b>lack of respect for the consumers</b> that they are expecting to purchase their products.</p> |                      |       |        |                             |   |
| <p>Several companies had to be called 4-5 times before they would provide any data. I had to be extremely persistent (to put it mildly) with some of them. If a company does not have the information readily available....and if I have to badger the company to get the data.....it is hard to trust it once it is provided.</p>  |                      |       |        |                             |   |
| <p>On the other hand, several companies actually have this valuable data right on their website (100 Gold Stars for them!).</p>   |                      |       |        |                             |   |
| <p>Suffice it to say, <b>the consumer should never have to beg for the basic nutritional information found on this chart.</b></p>   |                      |       |        |                             |   |
| <p>The worst company to deal with has been <b>Petsmart</b>. I will not bore the reader with the details but the bottom line is that this company has been a nightmare to deal with. Their lack of respect for the consumer is abundantly clear and <b>I strongly recommend that you spend your hard-earned dollars elsewhere.</b></p>   |                      |       |        |                             |   |

| <b>CAT FOOD - NUTRITIONAL COMPOSITION</b><br>Data compiled by Lisa A. Pierson, DVM<br>Typical nutrient analysis data provided by the respective companies<br>Wet only - <a href="#">no dry food</a> is listed<br>2017 |  |              |               |                                 |   |
|---|--|--------------|---------------|---------------------------------|---|
| <b>2 Sortable Charts:</b><br><b>1) Google Drive</b><br>(2 tabs - Data and Notes)<br><b>2) Extensive filters</b>   | <b>Caloric Distribution</b>  |              |               |                                 |   |
|   | <b>PROTEIN %</b>   | <b>FAT %</b> | <b>CARB %</b> | <b>mg PHOSPHORUS/ 100 kcals</b> | <b>CALORIES per 5.5 oz unless otherwise noted</b> |
| <b>Print</b><br><br>The print version above has many blank areas because I am waiting for data to come in. I will be adding to it over time.  |  |              |               |                                 |   |
|   | The Petsmart brands that I urge you to <b>not</b> purchase are: <b>Authority, Good Natured, Grreat Choice, and Simply Nourish</b> . There are plenty of other choices on the market made by companies that have more respect for the consumer and the deeply loved family members that are consuming their products.   |              |               |                                 |   |
|   | At this time, I also recommend that the reader NOT purchase: <b>Addiction, Nutrisca (Dogswell), Party Animal, and Feline Natural (K9 Natural)</b> . I will consider removing them from the NOT RECOMMENDED list if I ever receive TNA data from these companies.   |              |               |                                 |   |
|   | <b>Additional Comments</b>   |              |               |                                 |   |
|   | <b>Water</b> is my favorite word when feeding cats. I will not feed any dry food to any cat in my care. Cats have a low thirst drive and are designed to get their water needs met by their prey or food bowl. Canned food (vs dry kibble) promotes urinary tract health and optimal systemic hydration which is especially critical for cats with kidney insufficiency.   |              |               |                                 |   |
|   | Please see <a href="#">Urinary Tract Diseases</a> including Opie's pictures for a look at the <b>tremendous suffering that water- depleted diets very often cause</b> . Please do not fall into the trap that so many people do by engaging in wishful thinking and assuming that your cat makes up the water deficit at the water bowl when fed dry food. Studies have shown that when all water sources are considered (food and water bowl), cats eating dry food – even the “good drinkers” - consume ~50% the amount of water that a cat on canned food consumes. This is in spite of the fact that cats on water-rich diets rarely go to the water bowl. |              |               |                                 |   |
|   | <b>Composition:</b> The caloric distribution of protein, fat, carbohydrate content of a diet. 100% of a diet's calories come from protein, fat, and carbohydrate. Therefore: % protein calories + % fat calories + % carbohydrate calories = 100% This means that if, for example, a diet is appropriately low in carbohydrates, the diet will be higher in protein, fat, or both. It is like a three-way teeter totter - if one fraction goes up or down, one, or both, of the other two must increase or decrease accordingly to add up to 100%.   |              |               |                                 |   |
|   | <b>Carbohydrates:</b> This is an important area of consideration – especially for diabetic patients. I often see diabetic cat caregivers taking this value far too literally...assuming that 6% vs 9% is statistically significant when it is not. Unfortunately, this macronutrient is not actually measured in a lab. Instead, it is calculated by subtraction. In other words, we add up the moisture + protein + fat + fiber + ash and subtract that value from 100% leaving us with the carbohydrate fraction. However, any error in those Big Five values will result in an error (usually an overage) in the carbohydrate value.                        |              |               |                                 |   |
|   | Stated another way: The carb values noted on this chart are probably higher (overestimating) than they actually are. Even a value of 10% carbs could actually be closer to 0% carbs. Therefore, stick with the directive to stay below 10% carbohydrates but <b>do NOT get caught up in whether a diet says 10%...or 5%...or 0% because these numbers are just not that accurate.</b>  |              |               |                                 |   |

| <p align="center"><u>Print</u></p>  | <p align="center"><b>Caloric Distribution</b></p>  |                                    |                                     |   |   |
| <p>The print version above has many blank areas because I am waiting for data to come in. I will be adding to it over time.</p> | <p align="center"><b>PROTEIN %</b></p>   | <p align="center"><b>FAT %</b></p> | <p align="center"><b>CARB %</b></p> | <p align="center"><b>mg<br/>PHOSPHORUS/<br/>100 kcals</b></p> | <p align="center"><b>CALORIES per<br/>5.5 oz unless<br/>otherwise<br/>noted</b></p> |
|   | <p>Take it one step further and read the label. For example, if you do not see any grains, or “peas,” “potatoes,” “starch,” or “vegetables” on the label, even if it is listed as 10% carbs, chances are that it is much lower. Keep in mind that liver does have some carbohydrates since it is the organ that stores sugar for the body. That said, I DO want liver in the product since it is a wonderful source of nutrients and it is far better to get our vitamins and minerals from <b>**whole foods**</b> rather than from a bottle containing vitamins that were synthesized in a laboratory.</p>  |                                    |                                     |   |   |
|   | <p>“<b>Indoor,</b>” “<b>Weight Management,</b>” and “<b>Light</b>” are all used to describe diets that are usually high in carbohydrates. The goal of these diets is to make them less calorically-dense. Since 1 gram of a protein and carb = 4 calories and 1 gram of fat = 9 calories, these diets are low in fat. Keep in mind the “three-way tetter totter” discussed above in the Composition section. If one fraction (in this case, the fat) is lowered, either one or both of the other two fractions must be increased. In this case, the pet food companies <i>*should*</i> raise the protein when the fat is lowered but that would cut into their profit margin so, instead, they increase the carbs which is a cheaper source of calories.</p> |                                    |                                     |   |   |
|   | <p><b>Biological value of protein:</b> Animal-based protein has a much higher biological value when compared to plant-based protein. Grains supply both protein and carbohydrate. Therefore, high carb diets often have much of their protein coming from plants. Consider not only the <b>amount</b> of protein in a diet but also the <b>source</b> of the protein. Diets using whole grains or glutes (gluten = plant-based protein) have a portion of their protein coming from low biological value sources. See <a href="http://catinfo.org">catinfo.org</a> - <a href="#">Feeding Your Cat: Know the Basics of Feline Nutrition</a> for a discussion of biological value as it pertains to obligate carnivores.</p>                                   |                                    |                                     |   |   |
|   | <p><b>Protein source:</b> How do we know how much of the protein is coming from animals versus plants when an ingredient list includes both animal and plant (grains/potatoes/vegetables) protein sources? The answer is, we don’t know but we need to be aware of the ‘ingredient splitting’ issue. Ingredients are listed in descending order by weight. Consider this ingredient list: “Chicken, brewers rice, corn gluten meal, whole grain corn, wheat gluten.”</p>   |                                    |                                     |   |   |
|   | <p>Consumers often focus on the fact that “chicken” is the frst ingredient but when the grain fractions are added together, their contribution to the diet is greater than the meat. Meat is also higher in water than grains making it less protein-dense. This compounds the problem of grains contributing more to the protein level than the animal sources. This type of ingredient list does not represent an optimal carnivore diet. Meat ‘meals’ are a more concentrated source of protein but they are also very heavily processed which results in nutrient loss.</p>  |                                    |                                     |   |   |
|   | <p><b>Liver:</b> I definitely want to see liver in the product since it is a wonderful source of nutrients (vitamin A and D, copper, zinc, etc.,) and it is far better to get our vitamins and minerals from <b>*whole foods*</b> rather than from a bottle containing vitamins that were synthesized in a laboratory. That said, not every meal has to contain liver but I like to see some liver fed several times/week.</p>   |                                    |                                     |   |   |
|   |  |                                    |                                     |   |   |

| <p><b>2 Sortable Charts:</b><br/> <b>1) Google Drive</b><br/> (2 tabs - Data and Notes)<br/> <b>2) Extensive filters</b></p>    | <p align="center"><b>CAT FOOD - NUTRITIONAL COMPOSITION</b><br/> Data compiled by Lisa A. | <p>The print version above has many blank areas because I am waiting for data to come in. I will be adding to it over time.</p> | <p align="center"><b>PROTEIN %</b></p>  | <p align="center"><b>FAT %</b></p> | <p align="center"><b>CARB %</b></p> | <p align="center"><b>mg<br/>PHOSPHORUS/<br/>100 kcals</b></p> | <p align="center"><b>CALORIES per<br/>5.5 oz unless<br/>otherwise<br/>noted</b></p> |
|   | <p><b>Fish:</b> I do not favor feeding fish-based diets for several reasons: 1) allergy potential, 2) toxins/mercury levels, 3) PBDE levels (fire retardant chemicals with thyroid-disrupting properties), 4) often high in phosphorus and magnesium, 5) significant addiction issues - the cat will not eat anything else.</p>   |                                    |                                     |   |   |
|   |   |                                    |                                     |   |   |
|   | <p><b>Soy</b> does not belong in cat food and Purina often uses this ingredient. Cats have a hard enough time maintaining thyroid health (hyperthyroidism is extremely common in older cats) and soy is a known thyroid disruptor.</p>  |                                    |                                     |   |   |
|   |   |                                    |                                     |   |   |
|   | <p><b>Pouches</b> are typically high in water making them more expensive on a \$\$/calorie basis. I suggest looking for products with a maximum water content of 78%, versus 82% or 85%. Pouches do not give you much 'bang for your buck.'</p>   |                                    |                                     |   |   |
|   |   |                                    |                                     |   |   |
|   | <p><b>Obligate Carnivore:</b> For more information on the diet that obligate carnivores are designed to eat, see Dr. Zoran's article entitled "<a href="#">The Carnivore Connection to Nutrition in Cats.</a>"</p>  |                                    |                                     |   |   |
|   |   |                                    |                                     |   |   |
|   | <p><b>Product names:</b> You will notice that pet food labels use words such as "dinner" and "with" and "flavor." The "with" rule is also known as the "3% rule" meaning that if a label says "with chicken" <b>there only has to be 3% chicken in the product.</b> If the word "chicken dinner" is used, there only has to be 25% chicken in the product. If the word "flavor" is used, there does not even have to be any chicken present in the product. If you want to read more about pet food label rules see <a href="#">here</a>.</p> |                                    |                                     |   |   |
|   |   |                                    |                                     |   |   |
|   | <p>If you are interested in making your own cat food, see <a href="#">Making Cat Food</a> for a detailed discussion regarding safe preparation and sourcing, along with a recipe that I have been feeding to my own cats since 2003. The peace of mind that comes with my control over ingredients, composition, and safety issues is priceless. I have not fed any commercial food to my cats since 2003.</p>  |                                    |                                     |   |   |
|   |   |                                    |                                     |   |   |
|   | <p>This chart required hundreds of hours of phone calls, emails, and data entry to compile. Although I tried to be very careful with data entry, mistakes may have occurred. If a value does not look correct, <a href="#">contact</a> me. If you do not receive a response, contact the manufacturer for verification.</p>   |                                    |                                     |   |   |
|   |   |                                    |                                     |   |   |
|   | <p>Many thanks to Janet &amp; Binky for their pioneering work in supplying nutrient data for cat owners. I think that Binky would be pleased that Robbie picked up where he left off.</p>   |                                    |                                     |   |   |
|   |   |                                    |                                     |   |   |
